city Mumbai, India

Software engineer focused on backend and application development. I build **APIs, data pipelines, and web apps** with TypeScript, Node.js, Next.js, and PostgreSQL. Most of my work has been on small teams where I take a feature from database changes to the UI and deployment.

EXPERIENCE

01

Software Engineer — Loops GTM

CURRENT
loopsgtm.com · Internal tools for Meta ad accounts

Built the ad-insights app used to monitor client accounts spending thousands of dollars per day. It pulls campaign data through the Meta Marketing API, stores it in Postgres, and presents it in a Next.js dashboard.

- Implemented campaign-data ingestion and reporting in **TypeScript and Next.js**.
- Debugged broken **Pixel and CAPI events**, checkout drop-offs, and conversion attribution.
- Added checks for campaign structure, account health, and attribution windows.

Meta Marketing API TypeScript Next.js Postgres Pixel · CAPI

Engineer — Invy

PREVIOUS
invy.com · Portfolio intelligence app

Joined while the product was early and worked directly with the founding team. Built features across the React app and Node APIs, cleaned up existing code, and adapted the system as the product changed.

- Shipped app screens and their supporting **API endpoints**.
- Worked on data integrations and Postgres-backed features.
- Received a written testimonial from Jack Dorsey about my initiative and code quality.

"Samar is hard-working, proactive, and writes genuinely clean code. The kind of engineer you trust to ship."
— Jack Dorsey, Co-founder, Twitter & Block

TypeScript React Node Postgres

Independent Developer — Products & Client Work

ONGOING
Web apps · APIs · Third-party integrations

Build web products for myself and clients. I usually handle the database, backend, frontend, integrations, and deployment.

PROJECTS

02

ninjabchat.ai — AI app and API

ninjabchat.ai ↗
One app for using GPT, Claude, Gemini, and other models. Includes chat, web search, image and video generation, and a developer API.

limoni.vip — web application

limoni.vip
Independent product build. Worked across the backend, application logic, frontend, and deployment.

hyathi — software agency

hyathi.com ↗
Development work for client web, mobile, and AI products.

jun.so — AI workflow automation

jun.so ↗
Describe a workflow in plain English and Jun connects the apps and runs it. Built the task planner and integrations as a solo project.

SKILLS

TypeScript Node.js Next.js React Python
PostgreSQL SQL REST APIs
Meta Marketing API Pixel / CAPI

EDUCATION

B.S. Computer Science India · Completed
